ning of each regular issue of the PCT Gazette.*

(54) Title: HIGH-PRESSURE DISCHARGE LAMP

(57) Abstract: The invention relates to a high-pressure discharge lamp, at least comprising a burner (2) which has a burner wall (25) and a discharge chamber (21) enclosed by said burner wall (25), wherein a region with a lowest temperature and a region with a highest temperature establish themselves at the inner and the outer contour of the burner wall (25), respectively, during operation of the lamp and in dependence on the mounting position of the lamp, and a multilayer interference filter (3) which is provided on a portion of the outer contour of the burner wall (25), which interference filter (3) reflects towards the discharge chamber (21) mainly light in that wavelength range of the IR light that has a causal relationship to the maximum emissive power of the material of the burner wall (25).
